

Maximize your revenue with
RevUp Interconnect
A solution that manage
your entire interconnect
business

RevUp Interconnect is the market's most cost-effective solution for domestic and international settlements. It eliminates revenue leakage by ensuring every call is captured, rated and invoiced correctly – regardless of which type of network originates and terminates the call. This complete interconnect billing solution will help you maximize the potential revenues within this important domain.

For most operators, interconnect is both a large operating cost and an important source of revenue. Do you have the tools needed to capitalize on this revenue source? And those necessary to control the costs?

More complex interconnect rules and changing tariff structures place even higher requirements on both the interconnect billing solution as well as on the organization itself. Efficiency and ease of use is crucial to any interconnect organization trying to increase their revenue and maintain cost control.

The next generation interconnect billing solutions should make all users effective by providing intuitive interfaces, automation of repetitive tasks and wizards to minimize human errors. The intervals for new requirements will decrease in the future, meaning old and manual systems will not be an effective way of handling the interconnect business. You need an agile and responsive partner and platform.

Operators will also depend on a supplier that can deliver on time. By leveraging a highly flexible interconnect billing system, you can eliminate revenue leakage by ensuring every call is captured, rated and invoiced correctly, regardless of which type of network originates and terminates the call.

Combined with an end-to-end audit and dispute management system, you will also be able to manage effectively the countless interconnect invoices received as well as streamline the validation process, reconcile charges and manage settlements between multiple partners.

Value Proposition

RevUp Interconnect will help you manage your entire interconnect settlement business. Thanks to our proven delivery model and competent staff, it can be implemented as a turnkey project in a few weeks.

RevUp Interconnect is quick and easy to learn and use. Tasks that took hours to execute can now be done in seconds by your most inexperienced employee.

RevUp Interconnect is what you need to gain the control you want and the confidence you need to put your foot down in dispute negotiations.

Thanks to their experience working with all kinds of operators from all over the world, Basset staff are equipped to tackle all of your business challenges.

RevUp Interconnect can centralize a group operator's interconnect business in a single instant.

Highlighted features

- Partner and contract management
- Advanced real-time rating and re-rating
- True multi-operator support
- Automatic reconciliation
- Discount management
- Ad-hoc and self-customized reports
- Automatic reference data loading

Benefits

- **Fast ROI**

Modern, flexible and self-instructional, the system provides fast results for a small investment.

- **Future proof**

Our system is constantly evolving to keep up with market demand, new technologies and the latest standards.

- **Reduced Billing Cycle**

Easier and faster processes improve your cash flow.

- **Modern and flexible dashboard**

Real-time decision making information, easy to access from any work station in your network.

- **User definable reports**

Adapt to operators' needs in real-time for prompt and accurate decisions.

- **Web User Interface**

User-friendly interface makes the system easy to learn, without need for a client installation.

- **Wizards**

Gives usability and reduces the learning curve for new staff. Make sure the data is correct and consistent.

- **Alarm and error handling**

Minimizes action delays and improves overall business performance.

- **Traffic forecast**

Reduces cost and maximizes profit by analyzing trends and patterns.

- **Dispute management**

Streamline your settlement process and improve results within your interconnect business.

- **EDR editor**

Reduces time for corrections, improving the overall performance of the system.

- **Automatic processes**

Schedule standard tasks to be executed automatically and have time to focus on your core business.

”Zain in Jordan selected Basset as a partner to manage its Interconnect Business. The choice came as a result of the Basset’s unique approach and insight into current and future challenges facing telecommunications operators in this business segment. The company has been using Basset RevUp Interconnect to manage its Interconnect Business since 2005. The technology and expertise provided by Basset have exceeded the company’s expectations.”

*Mr. Samer Bazyan
International Services Sr. Manager
Zain Jordan*

“I have been pleased with the work that Basset has performed for the Telefónica operations in Central America this past year.

RevUp Interconnect is a powerful and flexible interconnect billing platform which allows us to timely and accurately manage our interconnection settlements.”

*Mr. Victor Manuel Prieto
Billing and Mediation Projects Manager
Telefonica Central America
Manager Roaming and Interconnect*

Why Basset can give you more:

- We built our business delivering solutions to the challengers of the telecom market. Our collaboration with these competitive network operators has shaped the way we develop, design and deliver our solutions.
- We are committed to adding more value to your business. Our work with hundreds of operations all around the world has taught us a lot about this industry.
- We create advanced solutions – and we make them easy to use. It is important you can start using them right away.
- Thanks to our smart technology, we can easily adapt our solutions to meet your business requirements and operational conditions. No code changes. No problems.
- We have a service delivery model that will help you work smarter. And it will also save you time and money.
- Our solutions are constantly evolving and we listen closely to feedback from our customers. You can be sure your systems will fulfill your needs both now and in the future.
